CC The present sequence represents the cDNA of a mammary carcinoma kinase,
CC called MCK-10. This kinase belongs to a novel family of receptor tyrosine
CC kinases, and expression is associated with proliferative diseases such as
CC cancer. The MCK-10 receptor tyrosine kinase has extensive sequence
CC similarity to the insulin receptor family. The MCK-10 gene was isolated
CC by PCR using 2 degenerate oligonucleotide primer pools, using a template
CC cDNA synthesised by reverse transcription of poly-A RNA from the human
CC mammary carcinoma cell line MCF7. MCK-10 is expressed in brain tissue,
CC and the protein shares homology with the tyrosine kinase neurotropin
CC receptor. Modulation of MCK-10 activity therefore may be used for
CC treatment of neurological disorders. MCK-10 is also expressed in a
CC variety of cancer cell lines and tumour tissue. The present sequence, or
CC parts of it, can be used for diagnostic purposes to detect aberrant
CC expression of MCK-10 genes. Inhibitors of MCK-10 receptor activity may
CC have therapeutic value in the treatment of diseases such as cancer

XX
CC   cDNA prepd. from human breast cancer cell line MCF7 (ATCC HTB22) was used
CC   in a PCR with two degenerate oligo primer pools based on conserved
CC   sequences of the kinase domain of receptor tyrosine kinases. One clone,
CC   designated MCK-10, was identified as novle RTK. The PCR fragment was used
CC   to screen a lambda gt11 library of human fetal brain cDNA. Several
CC   overlapping clones were identified. The composite of these cDNA clones is
CC   given in AAQ92522 and the deduced AA sequence in AAR75504. Some of the
CC   clones had a deletion of 6AA at posn. 2315 in the MCK-10 sequence. MCK-10
CC   has all the characteristics of a receptor PTK (see AAR75504 FT).
CC   Screening of human placental library yielded two cDNA clones. One of the
CC   clones isolated from the human fetal brain library contained an
CC   additional 18 nts in the TK domain. The MCK-10 splice isoforms have been
CC   designated MCK-10-1 (with an additional 111 bp between nts 1832 and 1943)
CC   ; MCK-10-2 (without any insertions); MCK-10-3 (with the additional 111
CC   bps and 18 bp in the TK domain); and MCK-10-4 (with the additional 18
CC   bp). The predicted mol. wts. of MCK-10-1 and MCK-10-2 proreceptors are
CC   101.13 and 97.17 kD respectively, and can thus be subdivided into a 34.31
CC   kD alpha subunit and a 66.84 or 62.88 kD beta subunits that contain the
CC   TK homology and alternative splice sites

PT A composition comprising a plurality of cDNAs, useful for detecting
PT altered expression of genes in an immunological response or for
PT diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma
PT or osteoarthritis.
XX
PS Claim 1; SEQ ID NO 1272; 50pp; English.
XX
CC The invention relates to a composition comprising a plurality of cDNAs
CC for detecting the altered expression of genes in an immunological
CC response. The invention also relates to a method of diagnosing or
CC monitoring the treatment of an immunopathological condition in a sample,
CC comprising obtaining nucleic acids from a sample, contacting the nucleic
CC acids of the sample with an array comprising the plurality of cDNAs under
CC conditions to form one or more hybridisation complexes, detecting the
CC hybridisation complexes and comparing the levels of the detected
CC hybridisation complexes with the level of hybridisation complexes
CC detected in a non-diseased sample, where an altered level of the detected
CC hybridisation complexes correlates with the presence of an
CC immunopathological condition. Also disclosed are an expression profile
CC comprising a microarray and a plurality of detectable complexes and a
CC method for identifying a plurality of polynucleotide probes. The cDNAs
CC are useful as hybridisable array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray can be used in
CC the diagnosis of an immunopathology, such as Crohn's disease, asthma,
CC ulcerative colitis, hypereosinophilia, irritable bowel syndrome,
CC osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in
CC identifying agents for the treatment of the diseases. The microarray may
CC also be used in drug discovery and development, toxicological and
CC carcinogenicity studies, forensics or pharmacogenomics. The composition
CC may also be used in purification of a subpopulation of mRNAs, cDNAs or
CC genomic fragments. This sequence represents a human cDNA of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html.

PT Diagnosing or staging brain tumor, useful for treating or imaging brain
PT tumor, comprises determining the upregulation of DDR1 mRNA or polypeptide
PT in the brain tumor.
XX
PS Disclosure; SEQ ID NO 1; 107pp; English.
XX
CC The present invention describes a method for diagnosing or staging brain
CC tumour comprising determining the upregulation of discoidin domain
CC receptor family member 1 (DDR1) mRNA or polypeptide in the brain tumour.
CC Also described: (1) a method of treating brain tumour by administering a
CC therapeutic amount of a compound that binds to, or inhibits, DDR1; (2) a
CC method of imaging a brain tumour by administering to a patient a compound
CC that specifically binds DDR1, where the compound is conjugated to an
CC imaging moiety; and (3) a method of screening candidate agents for
CC modulation of a brain tumour target protein by combining a candidate
CC biologically active agent with any one of a DDR1 polypeptide, a cell
CC comprising a nucleic acid encoding and expressing DDR1 polypeptide, or a
CC non-human transgenic animal model for brain tumour gene function
CC comprising a knockout of DDR1, an exogenous and stably transmitted DDR1
CC sequence; and determining the effect of the agent on DDR1 activity, where
CC the agents that modulate polypeptide activity provide for molecular and
CC cellular changes in brain tumour cells. DDR1 has cytostatic activity, and
CC can be used in gene therapy. The methods are useful for diagnosing,
CC staging, imaging and treating brain tumour. The present sequence encodes
CC human DDR1 transcript variant 2, which is used in the exemplification of
CC the present invention.
